

1. Given the linear equation $4y - 4x + 4 = 0$:

- (a) Find the line's x -intercept.
- (b) Find the line's y -intercept.
- (c) Sketch the graph of the line.

2. Given the linear equation $-3y - 3 = 0$:

- (a) Find the line's x -intercept.
- (b) Find the line's y -intercept.
- (c) Sketch the graph of the line.

3. Given the linear equation $4y - 5x + 6 = 0$:

- (a) Find the line's x -intercept.
- (b) Find the line's y -intercept.
- (c) Sketch the graph of the line.
